What means Forex?(Definition of Forex Trading) FOREX means [Foreign Exchange](#), and it works connecting major banks and brokers with the final users by specific programs or even using a webpage. Roughly, the broker, offers trading assets to the users, with the market quote, by the trading terminal, and the users choose what and how much to invest, optionally setting, at what price close the trade, both profit, and loss. Looks more complicated than Binaries, but gives us more flexibility to trade. It ends only if we choose to close the order, if the operation reached the profit or loss, or worst if our account has burned out. But the clock does not tick against our trade. Just our money. As well as in Binary Options, choosing the broker is a delicate task that requires all our attention. From him depends on, to receive our profits. Maybe I'm not a good technical advisor, but I hope my comments will help you to be clearest your understanding of this amazing and attractive world of trading. Good luck and trade with care. **By Alberto Cushnir**
