

4 new cryptocurrencies are available in MetaTrader 4 (MT4) -

RoboForex has expanded the list of the cryptocurrencies available for trading by adding several "hot" assets, including Bitcoin Cash (BCHUSD), Dash (DSHUSD), Litecoin (LTCUSD), and Ripple (XRPUSD). These instruments are already available in your MetaTrader 4 and MetaTrader 5 terminals. Experts are predicting that in 2018 the cryptocurrency market will continue developing. However, if the exponential growth perspective, according to many analysts, doesn't seem very likely right now, then the fact that the cryptocurrency market will become more stable is confirmed by the majority of market players. When introducing new cryptocurrencies, RoboForex is aimed to provide its clients with a great deal of various trading instruments, consistent high quality service and support, along with competitive trading conditions. **Source:** [RoboForex Broker](#) [RoboForex Broker review and Details](#) [Rebate for RoboForex](#)
