The PCN Airdrop Project has been completed successfully. In the near future, 50,000 TRX as a small initial investment will support 1% of the total token amount.

Regarding the plans associated with this project, we expect a logical, slow, and steady increase in the PCN token price. Concurrently, we are negotiating with different exchanges to add the PCN token.

At present, the PCN token is bought and sold on SunSwap, and in the following months, it will be added to other exchanges too.
