

[text] **Forex Brokers News FxPro Quant - Revolutionising Automated Trading** 19th February 2015, London. Employing an easy to use drag and drop interface, FxPro's revolutionary Quant Strategy Builder allows its users to create their own auto-trading strategies by visualising how technical indicators, logical functions and mathematical operators interact with each other. In this way complex trading algorithms can be created without the use of a coding language. The company's all new version includes a number of significant improvements, as well as being made freely available to all, underlining that FxPro is always on the side of their clients.

"Quant has been very well received by traders and this new version promises to deliver even more functionality. Aside from an updated design, we have added tabs that allow you to work on more than one strategy at a time, search and zoom functions, link colours, and now your Quant strategies can be saved as both MT4 EAs and cTrader robots. All of these features are freely available to all traders from our new FxPro Quant portal, whether they have an account with FxPro or not. We are so confident in the quality of our trading tools that we are happy to make them available to everyone."
