

[text] **USD/CHF Analysis and News** USDCHF continues to trade higher with the price action taking out the recent top at the 0.9750 level. USDCHF did experience a minor pull back into the 0.9800 support area. However it would appear that the price action has stabilized and has once again resumed its upward momentum with a target being at least Fridays high at the 0.9835 /0.9850 area. Alternatively USDCHF fails to hold above this mornings low could see a move down to the 0.9750 level. From a technical perspective USDCHF is trading in an intraday 1 hour up trend with the line of control at the 0.9600 level. **USD/CHF Chart**
