

EUR/USD Analysis (2015.12.30) Source: [FXCC Forex Broker](#)

[\(Review and Forex Rebates Up to 85%\)](#) The two largest economic power poles in the world are indisputably the European Union and the United States of America. The dollar, also called Greenback, is the world's most traded currency as well as the most widely held, making EUR/USD the most popular and traded currency pair. Due to its on-going state of liquidity, the pair offers very low spreads as the first choice of any trader seeking a profit from investing in the financial markets. Informed trading decisions and a wide array of trading strategies can be applied to this pair, due to the rich source of economic and financial data influencing the direction of its market price. Therefore, plenty of open opportunities to make huge financial profits arise from the ever-changing level of volatility this pair is characterized by. The direction of the EUR/USD trading market price is dictated by the comparative strength of these two major leading economies. Simply explained, if all else remains constant and the American economy registers a rapid growth, it will cause the Dollar to strengthen against a weaker Euro. The opposite is true if the Eurozone experiences a growth of its economy, which will lead the Euro to a stronger state, in comparison to the Dollar which will weaken. One of the major influences in the change of the relative strength is the level of interest rates. When the interest rates of the American currency are stronger than those of the key European economies, it accounts for a firm U.S. currency against the Euro. If the interest rates on Euro are strong, the Dollar normally drops.

Having stated this, the interest rates alone do not dictate the movement of the currency market prices. The dynamic of EUR/USD is highly dominated by the political instability of the Eurozone, as it is widely recognized fact that the Eurozone is a testing ground for economic and monetary policies. The variety of unforeseen changes and differences between the countries that comprise the EU account for a stronger Dollar against the Euro. These are the EUR/USD trading features you need to know before investing in the most popular currency pair in the market. **EUR/USD Chart**

MARKET ANALYSIS - Intraday Analysis Upwards scenario:

Appreciation above the resistance level at 1.0943 (R1) might prolong upside progress. In such scenario we would suggest next intraday target at 1.0964 (R2) and any further rise would then be limited to final resistance at 1.0986 (R3). Downwards scenario: Session low provides an important support level at 1.0920 (S1). Extension lower the initial support is being able to initiate bearish formation and suggest next intraday targets at 1.0900 (S2) and 1.0879 (S3) in perspective. **Resistance Levels: 1.0943 1.0964, 1.0986 Support Levels: 1.0920, 1.0900, 1.0879** **Source:** [Expro Forex Broker \(Review and Forex Rebates Up to 85%\)](#) EUR/USD Intraday: under pressure. **Pivot: 1.096 Most Likely Scenario:** short positions below 1.096 with targets @ 1.09 & 1.0865 in extension. **Alternative scenario:** above 1.096 look for further upside with 1.099 & 1.101 as targets. **Comment:** the RSI is capped by a declining trend line. **EUR/USD Chart**
