

[Demo Binary Options Accounts](#) - Every trader can replenish their virtual trading currency on a training account to trade at any given time. No need to risk your own funds now to test a particular strategy. Moreover, this feature increases traders' lifetime on the platform - you could notice yourself that traders' activity dies down only for a little while but not forever, because their training account is still active!

[IQ Robots](#) - is a first platform that allows creating trading robots for free. But this doesn't mean there are no benefits for you as an advertiser! After all, trading is carried out primarily on real funds and usually robots make much more trades than real people do. We already have a few videos of trading robots on our channel. They are presented in English only for now, but soon all the promotional materials (including landing pages) will be translated into all other

languages.
